

KASHYAP PATEL

Full-Stack Developer & AI Engineer

kashyappatel326@gmail.com | India | github.com/kashyap-p | linkedin.com/in/kashyap-p | [Portfolio](#)

PROFESSIONAL SUMMARY

Full-Stack Developer and AI Engineer with 7+ years building production web applications and multi-agent AI systems. Shipped 12+ public repositories spanning 3D interactive frontends (React, Three.js), resilient backends (Node.js, MongoDB), and LangGraph-based AI copilots with RAG and computer vision. Proven end-to-end delivery — from architecture to deployment on Vercel, Netlify, and Render.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML5, CSS3

Frontend: React 19, Next.js 16 (App Router), Three.js, React Three Fiber, Tailwind CSS 4, Framer Motion, shadcn/ui

Backend: Node.js, Express.js, REST API Design, WebSockets, Prisma ORM, Passport.js (JWT Auth)

AI / ML: LangGraph, Multi-Agent Orchestration, Retrieval-Augmented Generation (RAG), Vision-Language Models, LLM Integration, Fraud Detection

Databases: MongoDB, SQLite, PostgreSQL, Prisma

Tools & DevOps: Git, GitHub Actions, Docker, CI/CD, Vercel, Netlify, Render, Bun

EXPERIENCE

AI Engineer & Multi-Agent Systems Developer

Independent / Open Source | 2026 — Present | India

- Architected and shipped **ClaimSight**, a 9-agent LangGraph workflow automating insurance claims adjudication with RAG, computer-vision damage assessment, and fraud detection — delivering cited, traceable decisions that reduce manual review overhead.
- Integrated vision-language models to assess claim-photo damage severity and retrieve cited policy-document evidence via retrieval-augmented generation (RAG), enabling explainable AI decisions.
- Engineered an interactive 3D portfolio with Next.js 16, React Three Fiber, and WebGL, achieving smooth real-time rendering with mouse-parallax camera interaction.

Full-Stack Web Developer

Independent | 2024 — 2026 | India

- Built and deployed **Wanderlust**, a full-stack MERN travel platform with JWT authentication, geolocation maps, and Cloudinary image uploads — serving live traffic on Render.
- Developed a real-time weather dashboard (React, Vite) consuming the Open-Meteo API with a glassmorphism UI, weather-reactive dynamic backgrounds, and Canvas-based particle effects.
- Implemented a live GitHub API integration with 10-minute caching and rate-limit-protected refresh, auto-syncing 12+ repositories with zero manual maintenance.

Frontend Developer

Independent | 2023 — 2024 | India

- Engineered a React task management app with priority-queued lists, status tracking, and persistent state management — adopted as a daily personal productivity tool.
- Built 5+ responsive web applications (IMDB clone, alarm clock, tech-news, todo) in vanilla JavaScript, mastering DOM manipulation, async data fetching, and mobile-first layouts.
- Deployed static sites via GitHub Pages with optimized assets, achieving sub-2-second load times on mobile networks.

KEY PROJECTS

ClaimSight | TypeScript, Next.js, LangGraph, RAG, Vision AI

github.com/kashyap-p/claimsight | [Live Demo](#)

- 9-agent LangGraph copilot automating insurance claims adjudication with vision-based damage assessment, RAG over policy documents, and fraud detection with cited reasoning. Deployed on Vercel.

Weather Tracker | React, Vite, Open-Meteo API, Canvas

github.com/kashyap-p/weather-tracker | [Live Demo](#)

- Glassmorphism weather dashboard with weather-reactive dynamic backgrounds, city autocomplete search, and ambient Canvas particle effects. Deployed on GitHub Pages.

Wanderlust | Node.js, Express, MongoDB, EJS, Passport.js

github.com/kashyap-p/Wanderlust---Nodejs-Project | [Live Demo](#)

- Full-stack MERN travel listings platform with CRUD operations, JWT authentication, map geolocation, and image upload integration. Deployed on Vercel.
